DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 15-22 drawn to combination chipping tool apparatus, classified in class 144, subclass 176.
- II. Claims 10-14, 23 and 24 drawn to subcombination disk chipping tool, classified in class 144, subclass 241.
- III. Claims 25 and 26, drawn to method for detecting a state of attrition of a chipping tool, classified in class 144, subclass 373.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed as evidenced by claims 1 and 15. The subcombination (invention of Group II) has separate utility such as use in a rotary cutting tool for abrading, i.e., a rotary planarizer.

Accordingly, the inventions of Group I and II are separable and distinct.

Inventions Group III and Group I are related as process and apparatus for its practice.

The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed

Art Unit: 3725

can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process. For example, the invention of Group I fails to define a utilization or core area and consequently can not carry out the process of the invention of Group III. Further, the apparatus of the invention of Group I can be used to practice milling, thus resulting in a materially different process. Because the invention of Groups I and II are separable and distinct for the reasons noted above, the invention of Group II and III are also separable and distinct.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different search requirements and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
